

Press Release:

PACTware Workshop at Bayer Industry Services

Within its international road shows which will take place in Switzerland, France and Italy this year, PACTware Consortium e.V. will offer company specific workshops. Under the slogan “**Manufacturer-independent device operation in process automation**” the Workshop will demonstrate in one-day events how the cost of device operation can be reduced and plant efficiency increased.

The first company workshop will take place at Bayer Industry Services at Leverkusen / Germany.

We would like to point out that the workshop is publicly available and outside parties are cordially welcome.

Current themes will provide reports on the present state of the art and the future of FDT Technology. Modern and user-friendly operating concepts will be demonstrated using the example of **PACTware™**, the universal manufacturer and communication-independent operator interface. Skilled speakers from the world of process automation will report on their practical experiences. The solution of practical applications and the advantages of FDT Technology in process automation will be presented live using the PACTware multivendor installation.

Divided into small groups, the participants can use the PACTware multivendor installation and gain their own experiences in operating a variety of field devices with a common operator interface.

The workshop will be supplemented by a product exhibition of the participating companies: Bopp&Reuther, ICS, Krohne, Pepperl+Fuchs, Samson, Trebing & Himstedt, Turck und Vega.

If you are interested in attending this workshop or are considering such a workshop in your own company, please do not hesitate in contacting the PACTware business office.
